

INJECTA-FEM

Medroxyprogesterone Acetate 150 mg/ml suspension for injection

EFFECTIVE · NON-INVASIVE · CONVENIENT · QUICK

WHAT IS INJECTA-FEM

- **Releases progestin hormone** into the bloodstream
- **Administered by an injection** in the gluteal or deltoid muscle every 3 months by healthcare provider with immediate effectiveness
- **Mechanisms of action:** stops ovulation, inhibits sperm transport through the fallopian tube, and prevents implantation

WHO CAN USE INJECTA-FEM

Most sexually active women:

- Women looking for a **highly effective long-acting contraceptive option to limit or space births**
- **HIV-positive** or women using **antiretroviral (ARV) therapy**
- **Breastfeeding** women

WHO CANNOT USE INJECTA-FEM

Women with current or history of:

- Breast cancer
- Abnormal vaginal bleeding
- Risks factors for osteoporosis
- Severe liver dysfunction
- Conditions that could increase chances of heart disease, such as high blood pressure, blood clots in legs or lungs, or diabetes

BENEFITS FOR THE PROVIDER

- **Quick procedure**
- **Simple injection requires only basic skills**
- **Procedure does not require specialized clinical setup or equipment**
- **Does not require** prior pelvic examination, routine blood tests, cervical cancer screening, or breast examination

BENEFITS FOR THE PATIENT

- **> 99% effective**
- **Discreet and private contraceptive method**
- **Long-acting duration means no daily or monthly routine required**
- **Reduces symptoms of endometriosis,** like pelvic pain and irregular bleeding*
- **Less invasive procedure** than for other long-acting methods
- **Avoids estrogenic side effects**
- **Helps protect against endometrial cancer and uterine fibroids****
- **Can reduce or stop monthly bleeding,** which is not harmful and may help prevent anemia**
