**MIFEPRISTONE by Linepharma**

A medication used to safely end a pregnancy

**HIGH QUALITY · SAFE · PRIVATE · EASY TO USE · DISCREET**

**HOW IT WORKS**

- **Blocks the effects of progesterone**, a hormone needed to sustain pregnancy
- **Low progesterone level** causes uterine lining to soften and break down
- **Dilates the cervix**, aiding expulsion of uterine contents
- **Oral administration**
- **Highly effective (>96%)** in terminating pregnancy when combined with misoprostol¹

**OBSTETRIC AND GYNECOLOGICAL USES**

- **Highly effective for medical abortion** when followed by misoprostol
- Cervical softening and dilation prior to first trimester aspiration abortion
- Induction of labor after miscarriage

**PRODUCT DESCRIPTION**

- **Clinical dose of Mifepristone by Linepharma is 200 mg** (one tablet)
- **3 years** shelf life
- **To be stored below 30°C**, kept in foil packets until needed

INSTRUCTIONS FOR UTERINE EVACUATION: STEP 1

Swallow mifepristone tablet with water
- Clients should have someone with them for support
- They should eat something light (e.g., crackers) or take a drug to prevent vomiting (ask for an “anti-emetic” drug)

Wait for 36 hours after taking mifepristone tablet
- Most women do not feel any symptom during this period
- Some may feel like vomiting or have slight bleeding

INSTRUCTIONS FOR UTERINE EVACUATION: STEP 2

Administer 4 tablets of 200 mcg misoprostol (800 mcg total; purchased separately)
- Buccally, between your cheek and bottom gums for 30 minutes then swallow with water
- Sublingually, under your tongue for 30 minutes then swallow with water

What to expect:
- Clients should expect to have painful cramps and bleeding
- They should expect to pass clots of blood and tissue
