**MISOMIFE-FEM® COMBO**

Pack of 1 mifepristone 200mg tablet and 4 misoprostol 200mcg tablets

**AN EFFECTIVE, HIGH QUALITY, SAFE AND DISCREET OPTION FOR UTERINE EVACUATION**

**WHAT IS MISOMIFE-FEM® COMBO**

- **Mifepristone** 200mg (1 tablet) stops the action of the hormone (progesterone) that sustains pregnancy. This causes the embryo to detach from the uterus and the pregnancy to stop growing

- **Misoprostol** 800mcg (4 tablets) causes contraction, to push out the content of the uterus

**OBSTETRIC AND GYNECOLOGICAL USES**

Ensures complete uterine evacuation:

- For first-trimester abortion or miscarriage

- When therapeutic abortion is required for a pregnancy that is 9 weeks or less

- For treatment of postpartum hemorrhage / Post Abortion Care (PAC)

- To prevent a hysterectomy and shorten the duration of conservative management of placenta accreta

**ALSO AVAILABLE FROM WOMANCARE GLOBAL**

**MISOMIFE-FEM® COMBO**

Pack of 1 mifepristone 200mg tablet and 4 misoprostol 200mcg tablet

**AN EFFECTIVE, HIGH QUALITY, SAFE AND DISCREET OPTION FOR UTERINE EVACUATION**

**INSTRUCTIONS FOR UTERINE EVACUATION: STEP 1**

**Swallow mifepristone tablet with water**

- Clients should have someone with them for support
- They should eat something light (e.g., crackers) or take a drug to prevent vomiting (ask for an “anti-emetic” drug)

**Wait for 36 hours after taking misoprostol tablets**

- Most women do not feel any symptom during this period
- Some may feel like vomiting or have slight bleeding

**INSTRUCTIONS FOR UTERINE EVACUATION: STEP 2**

**Administer 4 tablets of 200 mcg misoprostol**

(800 mcg total; purchased separately)

- **Buccally**, between your cheek and bottom gums for 30 minutes then swallow with water
- **Sublingually**, under your tongue for 30 minutes then swallow with water

**What to expect:**

- Clients should expect to have painful cramps and bleeding
- They should expect to pass clots of blood and tissue
