WHAT IS POSTPIL®

- **Emergency contraceptive** to use after unprotected intercourse or in case of known or suspected contraceptive failure
- **Package contains 1 tablet of levonorgestrel 1.5 mg**
- **Not an abortion pill**; does not terminate established pregnancy
- **Does not protect against sexually transmitted infections (STIs)**
- **Debunking common myths:**
  - No health risks with repeated uses
  - Does not affect fertility
  - Does not increase the risk of ectopic pregnancy, cancer or cause long term side effects

WHO CAN USE POSTPIL®

- **Women of all reproductive ages who want to avoid pregnancy**, including adolescents, women who are breastfeeding, or women with history of ectopic pregnancy
- **No absolute contraindications**, except hypersensitivity to levonorgestrel

WHY USE POSTPIL®

- **WHO-recommended regimen** to prevent pregnancy
- **Meets European standards and certifications** for quality control of medicines and production processes
- **1-pill formulation** is easier to follow correctly than 2-pill formulation
- **High-quality yet affordable product**

WHEN TO USE POSTPIL®

• Can be used at any time during the menstrual cycle for the following situations:
  ◦ Desire to avoid pregnancy
  ◦ Nonconsensual or forced unprotected sex
  ◦ Possible contraceptive failure or incorrect use
  ◦ Concern about the withdrawal method
  ◦ Uncertainty about the ‘safe period’

• Can be used if already administered in the same menstrual cycle

HOW POSTPIL® WORKS

• Disrupts ovulation and thickens the cervical mucus, which inhibits sperm mobility and prevents fertilization

• No examinations or laboratory tests needed

• Reduces risk of pregnancy by 80%-90%

• Side effects may include: nausea, lower abdominal pain, fatigue, headache, dizziness, breast tenderness, delay of menses (>7 days)

HOW TO USE POSTPIL®

• To be used as soon as possible up to 3 days (72 hours) after unprotected intercourse for best results. Postpil® is more effective the sooner it is taken after unprotected sex.

• Dosage should not be taken more than once within 24 hours, except if the woman vomits within 2 hours after use

• Risk of pregnancy if repeated unprotected intercourse within 24 hours after taking the Postpil®
