WHAT IS POSTPIL®

- Emergency contraceptive to use after unprotected intercourse or in case of known or suspected contraceptive failure
- Package contains 1 tablet of levonorgestrel 1.5 mg
- Conforms to Eur. Pharmacopeia and manufactured at an EU cGMP-approved facility
- Not an abortion pill; does not terminate established pregnancy
- Does not protect against sexually transmitted infections (STIs)
- Debunking common myths:
  - No health risks with repeated uses
  - Does not affect fertility
  - Does not increase the risk of ectopic pregnancy, cancer or cause long term side effects

WHO CAN USE POSTPIL®

- Women of all reproductive ages who want to avoid pregnancy, including adolescents, women who are breastfeeding, or women with history of ectopic pregnancy
- No absolute contraindications, except hypersensitivity to levonorgestrel

WHY USE POSTPIL®

- WHO-recommended regimen to prevent pregnancy
- Meets European standards and certifications for quality control of medicines and production processes
- 1-pill formulation is easier to follow correctly than 2-pill formulation
- High-quality yet affordable product
POSTPIL®

Effective and convenient 1-pill solution for emergency contraceptive

EASY-TO-USE • EASY-TO-FIND • EFFECTIVE • SAFE

WHEN TO USE POSTPIL®

• Can be used at any time during the menstrual cycle for the following situations:
  ○ Desire to avoid pregnancy
  ○ Nonconsensual or forced unprotected sex
  ○ Possible contraceptive failure or incorrect use
  ○ Concern about the withdrawal method
  ○ Uncertainty about the ‘safe period’

• Can be used if already administered in the same menstrual cycle

HOW POSTPIL® WORKS

• Disrupts ovulation and thickens the cervical mucus, which inhibits sperm mobility and prevents fertilization

• No examinations or laboratory tests needed¹

• Reduces risk of pregnancy by 80%-90%

• Side effects may include: nausea, lower abdominal pain, fatigue, headache, dizziness, breast tenderness, delay of menses (>7 days)

HOW TO USE POSTPIL®

• To be used as soon as possible up to 5 days (120 hours) after unprotected intercourse for best results. Postpil® is more effective the sooner it is taken after unprotected sex.

• Dosage should not be taken more than once within 24 hours, except if the woman vomits within 2 hours after use

• Risk of pregnancy if repeated unprotected intercourse within 24 hours after taking the Postpil®
